

Gammapy: A Python package for gamma-ray astronomy

Gammapy contributors (author list tbd)

October 10, 2018

ABSTRACT

In this paper, we plan to describe Gammapy version 0.9, and briefly outline plans for 1.0. We plan to submit it in December 2018.

Gammapy context: HESS, CTA, Fermi, open data, open-source, Python, community

Gammapy aims

Gammapy methods

Gammapy results

Gammapy conclusions

Key words. Gamma rays: general - Astronomical instrumentation, methods and techniques - Methods: data analysis

1. Introduction

Gammapy is a Python package for gamma-ray astronomy.

TODO: Figure 1: Data -> Gammapy -> Spectra etc with some details

Basic idea: build on Numpy and Astropy, use Python stack

TODO: Figure 2: Gammapy software stack

Here's a list of references I'd like to cite ... to be incorporated into the main text somewhere:

- The Python programming language¹
- Gammapy webpage²
- Astropy (Astropy Collaboration et al. 2013)
- PyFACT (Raue & Deil 2012)
- FITS (Pence et al. 2010)
- Gamma-astro data formats tbd (all contributors to the spec)
- Sherpa (Refsdal et al. 2011, 2009)
- Naima³ (Zabalza 2015)
- Gammapy use in science publications: (Owen et al. 2015), SNR shell, HGPS

* Gammapy – A Python package for gamma-ray astronomy
* Gammapy – A prototype for the CTA science tools
* Astropy: A community Python package for astronomy
* THE ASTROPY PROJECT: BUILDING AN INCLUSIVE, OPEN-SCIENCE PROJECT AND STATUS OF THE V2.0 CORE PACKAGE
* GammaLib and ctools
* Fermipy proceedings
* SunPy: Python for Solar Physics. An implementation for local correlation tracking *

2. Gammapy package

Outline: * List typical analysis use cases * Can use from Python and Jupyter -> show Figure with Jupyter notebook here. * Gammapy code structure * How Numpy and Astropy is used

Figures: * Add a Figure showing dataflow in a typical application DL3 at the top, spectrum, map, lightcurve, fit results

Fig. 1. Gammapy is a Python package for high-level gamma-ray data analysis. Using event lists, exposures and point spread functions as input you can use it to generate science results such as images, spectra, light curves or source catalogs. So far it has been used to simulate and analyse H.E.S.S., CTA and *Fermi*-LAT data, hopefully it will also be applied to e.g. VERITAS, MAGIC or HAWC data in the future.

at the bottom. Mention major classes in between (DataStore, EventList, Map, MapMaker, MapFit, ...) * Probably not: Figure showing sub-packages and how they relate (gammapy.data and gammapy.irf at the base, then gammapy.maps, etc. * The code example Figure how to make a counts map, to explain how the package works.

3. Applications

Each application example is a notebook in the online material: We could have one analysis as Python scripts instead of notebook in the online material. At the start of this section, point to gammapy-paper repo on Github and say that there's a Binder where people can try the examples online.

² <http://gammapy.org>

³ <https://github.com/zblz/naima>

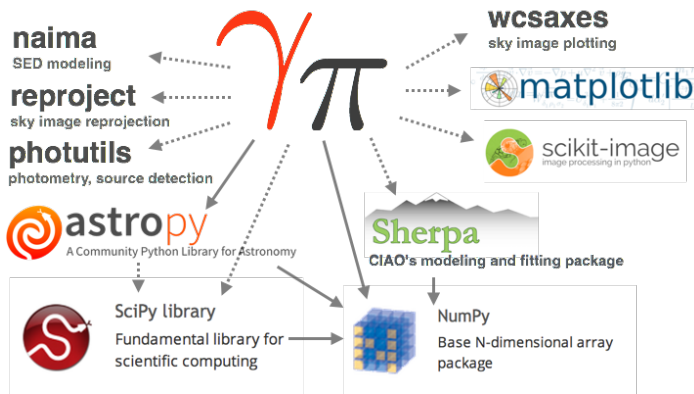

Fig. 2. The Gammapy stack. Required dependencies Numpy and Astropy are illustrated with solid arrows, optional dependencies (the rest) with dashed arrows.

TODO: mention other application examples (joint Crab paper, HESS validation paper, HGPS, ...) here or in a subsection "other applications" at the end of this section?

3.1. Source detection

See Figure 3.

Ref: (Stewart 2009)

3.2. CTA simulation

CTA application example. 3D simulate and fit using public prod3 IRFs. Diffuse emission + maybe a shell -> image and spectrum come out.

3.3. HESS

Maybe HESS Light curve using PKS flare from HESS

3.4. Fermi

Fermi: Galactic center, as in our notebook, same region as CTA.

4. Gammapy project

Infrastructure etc.

4.1. Development, testing

-Github, pytest, CI, PIGs?

4.2. Documentation

- Notebooks

4.3. Software distribution and user support

- Pip, conda, versions, gammapy download

TODO: Figure: Screenshot of Jupyter notebook or docs with notebook, could show the interactive maps view

```
m = Map.read("diffuse.fits")
m.plot_interactive()
```

Article number, page 2 of 4

5. Summary and Outlook

Summary what we have in v0.9 and presented in this paper.

Roadmap to v1.0, about half a page.

Short conclusion: Gammapy has potential to be the Python package for gamma-ray astronomy.

Acknowledgements. We would like to thank the Numpy, Scipy, IPython and Matplotlib communities for providing their packages which are invaluable to the development of Astropy. We thank the GitHub team for providing us with an excellent free development platform. We also are grateful to Read the Docs (<https://readthedocs.org/>), and Travis (<https://www.travis-ci.org/>) for providing free documentation hosting and testing respectively. Finally, we would like to thank all the Gammapy users that have provided feedback and submitted bug reports. TODO: copy over stuff from <http://docs.gammapy.org/en/latest/about.html#thanks>.
